

IS YOUR AIR SAFE TO BREATHE?

Ram

ROOM AIR MONITOR

Finally there is a simple, low cost way for ice arena managers and owners to protect the players, coaches, fans and employees of an ice skating arena.

The Room Air Monitor (RAM) panel plugs into the wall and starts monitoring the air quality of the arena right away.

You can breathe a sigh of relief once you install the RAM in your ice arena. Why? Because the RAM tracks air quality 24 hours a day, 7 days per week, 365 days per year.
